

Priority Stuff

- Subscription Gives X many words/pages (payges) to read based on word counts of chapters.
- Payges are defined as so many words but a work can be assigned more or less pages than actual word count, but default is set in software
- Workflow of submission from authors; i.e. submitted, edited, reviewed, approved, promoted, published, archived, unpublished statuses
- Statuses for books; submitted, approved, offered, contracted, withdrawn
- Readers need to be able to leave comments/reviews (pay per view and subscribers)
- Comments/reviews should be viewable by all/anonymous users.
- Ability to offer free content to different classes of users. (Trials and Bonus content)
- Ability to store and display artwork as part of chapters and books.
- Categorization and Taxonomy for Stories/Chapters
- PHP7x (preferred) or HHVM compliant
- Ability to edit/post stories/chapters using WYSIWYG and regular HTML editors.
- Ability to have Viewers, Subscribers (various levels), Authors, Editors, Moderators, Admins
- Ability to control access to reviews and comments via access levels
- System to keep track of Contracts with Authors by work, with terms
- Keep track of Payments from Users, amounts owed, collected, and reminders or offers for renewals
- Keep Track of Payments to Authors, amounts earned by book, author share, royalties owed, royalties paid, advances given,
- Keep Track of Author Earnings
- Reports for Admins and Authors
- Filter posts using standard TIDY/HTMLAWED libraries for pretty HTML and XSS.
- Methods to report and filter spam, like akismet or stop forum spam

Nice to get soonest

- Ability to have an artwork ONLY chapter (think comic or manga). (to be approved by admin, with manually entered wordcount).

- Can subscribe not only to whole archive or system, but just one story/serial or one author
- Ability to purchase extra words at wholesale discount.
- Authors have the ability to turn off comments on each chapter.
- Reviews are like comments but to be attached to the book.
- Reviews can be edited or removed by Admin.
- Comments are edited only by admin, but may be unpublished by author.
- Private Messages to and From users/authors/admins
- Ability for readers to keep list of favorite authors/books and/or bookmarks
- Allow readers to publish publicly, to friends, or keep private their list of fav authors/books
- Ability to re-use code as framework or CMS
- Modular Code / Code Modules
- REDIS or Memcached (or combination) for Caching.
- Full Text Search System, preferably using Apache SOLR with Faceting for Categorization/Taxonomy
- Ability to control access to Archived/older content based on class of user/author/purchase type.
- Ability to group authors by pay rate
- Facebook Style Like System
- ability for users to prepay for content that hasn't been published yet
- Social Media Integration (share/Like no Auth)
- Bonuses for Authors that achieve certain read counts
- Responsive Design / Mobile Version
- Ability for authors to request payment (from earnings) at certain pay levels
- Ability to Flag Content and or Users according to admin defined criteria (similar to Taxonomy but edited via ajax links and not opening node/content for full editing)
- Ability to sell collections of content
- Ability to track/add metrics

Will Want Eventually

- User Selectable CSS Themes
- User Modifiable Themes (Colors)
- Friends/Followers system
- Ability for authors to post blogs/status updates of stories/books published via separate url `authorname.blogs.nextpayge.com` but with listing of blogs on front page.
- Ability to launch a forum system at a later date (possibly integration with other software)
- Discussions to take place about which modules will be released free or for sold to the community (at both our benefits)
- Mobile App (API?)
- Affiliate System (commission based on first month sales to new users)
- Ability to do Single Sign On and User Sync between sites using this framework/site build
